

Swinger Machine

Please watch the swinger video on my website – dankubin.com It will explain a lot of things!

Keep oil & sterilants away from bearings and electrical connections.

The direction of the clipcord will effect how the machine hits. Counter clockwise (positive down) will give a punchy hit. Clockwise (positive up) will give it a more passive/typical rotary hit.

The stroke is adjustable! It has a 4.3, 3.7, and 3.2 mm stroke setting.

This machine does best when ran under 5.5 volts... even for lining. The hit loses its magic at higher speeds.

Thanks & enjoy!
